

(a) Local K_{eff} (no FFT)

$$\mathbf{H}_{\text{demag}} \approx -\mu_0 M_s m_z \hat{z}$$

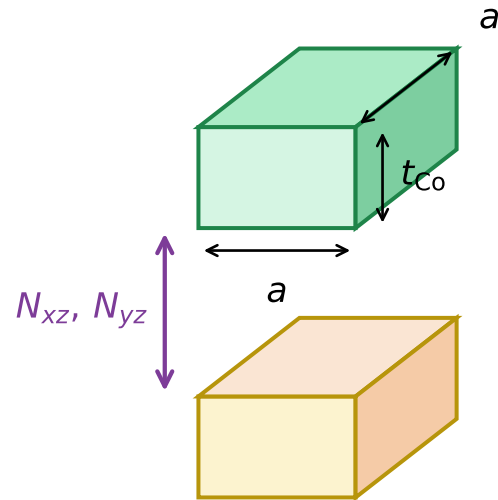

$$K_{\text{eff}} = K - \frac{1}{2} \mu_0 M_s^2$$

(b) Slab kernel (FFT)

$$f(k, t_{\text{Co}}) = \frac{1 - e^{-|k| t_{\text{Co}}}}{|k| t_{\text{Co}}}$$

(c) Newell kernel (FFT)

Gauss-Legendre over each cell face
